

How Tanium supports NASCIO's 2026 Top 10 Priorities for State CIOs

Accelerate decision agility, save costs, and strengthen resilience with the Tanium Autonomous IT Platform. Here's how Tanium supports NASCIO's 2026 Top 10 Priorities for State CIOs through a single, unified platform for IT operations and security, driven by AI and real-time endpoint intelligence.

1. Artificial Intelligence / Gen AI / Agentic AI / Machine Learning

Tanium helps state IT organizations adopt AI more safely and effectively by grounding automation and decision-making in real-time endpoint intelligence. The Tanium Autonomous IT Platform combines generative, agentic, and predictive AI capabilities to answer questions, surface insights, invoke workflows, explain logic, and support human-in-the-loop oversight. With confidence scores, progressive rollouts, and audit visibility, Tanium helps state CIOs operationalize AI in a governed, trusted way across IT and security workflows.

2. Cybersecurity and Risk Management

Tanium supports cybersecurity and risk management by giving state teams real-time visibility and control across endpoints, plus continuous detection, prioritization, and remediation of vulnerabilities and threats. Through integrated exposure management, security operations, and endpoint management, the Tanium Autonomous IT Platform helps agencies reduce risk, prevent compliance drift, improve incident response, and strengthen resilience with closed-loop actions across IT and security operations.

3. Budget / Cost Control / Fiscal Management

Tanium helps state CIOs reduce cost and complexity by consolidating endpoint management and security into one unified platform. By replacing fragmented tools, identifying unused licensed products, automating manual work, and improving operational efficiency, Tanium helps agencies stretch limited budgets while maintaining visibility, compliance, and security at scale.

4. Modernization

Tanium helps state organizations modernize how IT and security operations are delivered. Instead of fragmented legacy tools and manual workflows, the Tanium Autonomous IT Platform enables agencies to adopt an AI-driven operating model for managing and securing endpoints across IT, OT and mobile environments with real-time asset visibility, automated patching, policy enforcement and integrated IT and security workflows, Tanium helps agencies modernize infrastructure operations while reducing operational complexity and improving resilience.

5. Digital Government / Digital Services

Leveraging digital employee experience capabilities, the Tanium Autonomous IT Platform enables a closed feedback loop across internal systems and services, providing real-time insight into service performance and helping ensure digital services are consistently delivered as intended across government environments. With unified visibility, automated remediation, endpoint performance optimization, and integrated IT and security workflows, Tanium helps reduce downtime, improve service continuity, and free staff to focus on higher-value digital initiatives for residents and state employees.

6. Accessibility

Tanium is committed to the highest accessibility standards for our products. To date, Tanium has focused on compliance with U.S. Federal regulations—specifically Section 508 of the Rehabilitation Act of 1998. Tanium has conducted third-party accessibility assessments over the course of product development for many years and certifies against the WCAG 2.2 / VPAT 2.5 standards for major product modules. In recent testing, the Tanium Console UI achieved support or partially supported for applicable WCAG 2.2 criteria. Tanium can make available any VPAT reports on a module-by-module basis as part of a larger solution planning process for any customer or prospect.

7. Identity & Access Management

The Tanium Autonomous IT Platform supports identity and access management by integrating endpoint intelligence with broader security workflows. By incorporating device posture, risk context, and real-time visibility into access-related decisions, Tanium helps organizations strengthen enforcement, improve security visibility, and support trusted access across workforce environments to achieve critical Zero Trust outcomes.

8. Data Management & Analytics

Tanium supports data management and analytics by delivering real-time endpoint intelligence that improves visibility, governance, and operational decision-making. The Tanium Autonomous IT Platform helps organizations turn endpoint telemetry, risk data, compliance context, and asset intelligence into actionable insights that support business intelligence, predictive actions, and stronger governance across IT and security operations.

9. Consolidation / Optimization

Tanium strongly aligns to consolidation and optimization by centralizing endpoint management, exposure management, and security operations in one platform. This reduces tool sprawl, simplifies workflows, improves cross-team visibility, and helps agencies adopt more enterprise-wide operating models for service delivery, governance, and reporting across IT and security.

10. Cloud Services

A GovRAMP and FedRAMP Authorized provider, Tanium helps CIOs extend visibility, governance, and security across hybrid and cloud environments. By delivering real-time endpoint intelligence and unified control across cloud workloads, virtual machines, and traditional endpoints, Tanium helps agencies maintain consistent security posture compliance and operational oversight as cloud adoption expands.

Tanium Autonomous IT Platform

Tanium transforms how organizations manage and secure endpoints with a single, unified platform driven by AI and real-time endpoint intelligence. Tanium's Autonomous IT capabilities deliver unified endpoint management and security from one platform—helping state CIOs accelerate decision agility, save costs, and strengthen resilience. Tanium brings together endpoint management, exposure management, and security operations with deep integrations and trusted AI capabilities such as generative, agentic, and predictive AI, confidence scores, adaptive actions, and progressive rollouts.

Find unknown endpoints and assess your IT risk with a no-obligation risk assessment from Tanium.
